

The Centreville Observer.

VOL. XLVI.

CENTREVILLE, MARYLAND, SATURDAY, JANUARY 15, 1910

HORTICULTURAL SOCIETY IS ROYALLY WELCOMED

Three Days' Session Held in Opera House, Centreville.

HUNDREDS OF QUEEN ANNE'S COUN- TIANS VIEW THE MAGNIFICENT EXHIBITS OF FRUITS AND NUTS. OFFICERS ELECTED. DOVER NEXT MEETING PLACE.

Centreville threw out the latch string with host customary promptness to admit the Twenty-third Annual Convention of the Peninsula Horticultural Society, at the Opera House, last Tuesday afternoon, and since that time agriculturists from all sections of Maryland, Delaware and Pennsylvania have enjoyed our citizens' hospitality, and the different sessions of the Society, which will be recorded in its annals as the most successful in the history of the organization.

Although Queen Anne's County folkshafers were in many places almost altogether closed, necessitating the absence of many farmers in the more isolated portions of the county, the attendance during the week was nothing if not decidedly satisfactory, and it is estimated that thousands of persons viewed the handsome exhibits in the Assembly Room of the building and attended the meetings in the Auditorium.

The Twenty-third Convention of the Society convened in the Auditorium of the Opera House Tuesday afternoon at 2 o'clock, with perhaps the best program within the memory of the oldest members of those yearly agricultural gatherings. W. Irving Walker, Esq., unknown throughout Queen Anne's State and the rest of Maryland, is President of the organization, and it was largely through his instrumentality that Queen Anne's was accorded the honor and privilege of entertaining the convention at Centreville this year.

His meritorious work in the preparation of the program, which proved of such inestimable value to the agricultural interests of the county, cannot but meet with the hearty approval of every person who attended one or another of the sessions, and the influence of the many suggestions, revelations and farming views propounded by able speakers will be felt no doubt in the years not far distant.

The Society Welcomed

The first session of the convention opened at 2 o'clock Tuesday afternoon, and, following devotionally by Rev. Dr. Derry Blake, pastor of Grace Church, Rev. Walter B. Stahl, rector of St. Paul's Church, delivered the address of welcome in behalf of Centreville and the agriculturists of this section and vicinity. He extended the glad hand of welcome to the visiting agriculturists and members of the Peninsula Horticultural Society, paid a glowing tribute to the tillers of the soil, and compared their noble profession to the commercial and business workers whose labors are often much less important native, so far as the teeming millions of humanity are concerned. His address touched the keynote of sentiment in the breast of every visitor, and each felt that the key of egress and ingress which had been so generously extended was sincere, loyal and appreciative of their presence.

The response in behalf of the Society, came from J. W. Kerr, Esq., of Denton, Caroline county. He extended thanks for the cordial welcome accorded, but stated that in the lengthy acquaintance he had cherished with Queen Anne's county and her citizenship, he could not conceive of other than just such a warm, cordial and hearty welcome as the Society and its friends were accorded. He continued: "We came here to Queen Anne's and Centreville, not only to test the depth of your hospitality, which has certainly been most generously extended, but to present to you such exhibits as may best serve to instruct and aid in their further growth and production in this section. The display of fruits and other soil products are in themselves a substantial attestation of what can be done here, and I hope that the farmers of Queen Anne's county may enjoy the same amount of pleasure from increased crops that we have from your hearty and hospitable welcome."

President's Address

The annual address of President W.

Irving Walker was next delivered. His talk was in every way an echo of the sentiments of this fellow horticulturist workers, and at its completion the conviction was felt that if the methods he advocated were adhered to and his advice followed, the Delmarva Peninsula would indeed become a better crop producing nucleus; more money would even usually be placed in circulation and the general trend would be to a higher grade of improvement in farm life than ever before.

Mr. Walker summed up the possibilities of the farmers of this section of the United States as follows: "Surrounded as we are by purely an agricultural section, the soil of a type and fertility producing yields of cereals and forage crops equaling any within the State, and at a minimum cost of production, as well as marketing, we have neglected in a great measure the opportunities which are within our reach in not having taken up apple growing on the same extensive scale we grew the peach, back in the seventies and eighties."

In reference to the exhibits displayed in the Assembly Room of the building, he continued: "The display of fruit and other exhibits seen on the tables in the Assembly Room speak volumes as to the possibilities of our soil and climate, showing and proving the statements made before our Society by men who have been termed 'famous,' that the pictures so often pointed to us can be reproduced by every farmer between the lines of the peninsula."

Cape Charles, if they will adopt the same fundamental principles in planting, cultivating, spraying, pickling and packing followed by such men as Frank H. Soper, F. C. Bancroft, James S. Harris, the late Robert S. Emory and many others of the Society."

Mr. Walker also spoke of the new State roads now under construction in making marketing more advantageous, and referred to the effort in Maryland to improve the public thoroughfares for the guidance of our sister state. Details were given in making similar improvements for the benefit of its agriculturists.

He concluded by saying: "I feel grateful to all those who have so liberally contributed towards making this exhibition of fruits the best in the history of the Society, and for the loyal support and encouragement during my term of office, bespeaking for my successor your most hearty co-operation for the coming year."

Experts Address Meeting

Following the President's address, the regular program work was commenced, beginning with an address on "Peach Culture" by W. G. Dawson, Esq., of Cambridge, Md. Mr. Dawson prefaced his remarks with a resume of peach growth in this section some years ago, and, comparing the time when our land blossomed with fruit flowers and orchards overrun with money from the bountiful yield, and the present, with the lack of trees and a possibility of almost total extinction staring the growers into disheartenedness. He spoke at length on the means successfully used to combat the enemy of fruit, such as "San Jose Scale," "yellow" and "little peach." He advised spraying in a liberal form for San Jose Scale, but "yellow" were even more dangerous, inasmuch as the peculiarities of the disease is not so well known. "Little peach," he declared, has not extended to any great amount on this Peninsula, consequently the effect has not been very seriously felt. He claimed that the diseases first originated in the old trees that were left by growers after they had become unproductive, where the insect breed, and finally caused the disease, now so destructive, to spread.

He continued: "Peach growing has not been profitable on this Peninsula during the last ten years, and the three most destructive diseases are rapidly lessening the output of the section from year to year. There is but one method in order to bring this Peninsula back to its peach growing possibilities, and that is by effectively preventing the ravages of disease as described, and proper tilling of the trees when they assume a flourishing condition."

Potato Talk

Eugene Shalorus, Esq., of Middleburg, Del., followed with an interesting address on market gardening. He struck the keynote of his address in the first statement: "Good seeds are cheap at any price." He continued: "Bad seeds are the cause of many crop failures, and man's trading seasons are made dismal failures because the farmer in his effort to save in purchasing seeds receives goods of decidedly inferior quality and ultimately experiences a correspondingly inferior produce."

He compared Maine potato growing to Maryland, and while承认ing that Maryland was among the better potato states, declared if the local men would adopt more of the New England State's methods, the practice would make a very material difference in the yearly yields. He also showed how spraying at a cost of about \$10 per acre, on the same amount of land increased the yield value about \$400, or a net profit of \$300 above cost of spraying.

For Seed Legislation

Following Mr. Shalorus' novel and interesting address to improve seed division, a motion was made by President J. W. Kerr, of the Maryland State Horticultural Society, that a bill for the passage of a pure seed law be brought before the legislature now in session, burying the rule of either than perfectly pure seeds.

His motion brought on further discussion, and a former Maine potato dealer was asked to address the meeting on the practices of Maine farmers in reference to potato seed cutting. He admitted that potato seeds can infest

and also succeeded that the

partial reason of so many

E. W. Sylvester, of the

Delaware Agricultural College, delivered an address on Education, the pa-

ge of the Centreville High School and

Centreville Primary School being pre-

pared at special invitation. He made a

plea for the further education of the

boys and girls of our country, stating

that they were the country's greatest

natural resource. Incidentally he favored increasing the school appropria-

tions so that the little one-room

schools of today, which he says are but

relics of primitive days, may be re-

moved and the necessary buildings

erected in their stead. He also recom-

mended extensive outside school im-

provements, and endorsed the good

roads law as the means of placing the

rural districts in closer relationship

with educational facilities. He also

spoke of the growth and work of the

Maryland Agricultural College, and

gave a short resume of the different

fruit diseases and the preventatives

now in use. He concluded by saying:

"The American farmer represents the

highest type of the Nation's citizenship

and he must enjoy the same facilities

as his more fortunate brother, in order

to overcome at least some of the ob-

stacles of rural life."

The afternoon session adjourned af-

ter being addressed by Prof. C. A.

McCue, of the Delaware Experiment

Station, and Prof. T. B. Symons, of

the Maryland Experiment Station, on

"Spraying" and "Insects."

To Centreville must go the honor of giving the Society a reception such as it did not receive at either Baltimore and Wilmington, the chief cities of both the Old Line and Diamond States, and to those present was accorded the pleasure of experiencing such hospitality as only Centreville ladies can bestow in all the alluring charms of epicure and beauty.

The reception continued from 8:30 until 11, during which time hundreds of persons viewed the exhibits and enjoyed the evening in general round of merrymaking, in which the visitors were made the central figures. Music was dispensed the entire evening by the orchestra.

Wednesday's Session

Wednesday, the second day of the Convention, opened with a magnificent attendance, and, while the morning gathering was not large, the afternoon session was increased by scores of persons who arrived over the Maryland, Delaware & Virginia and Pennsylvania Railroads. There were also several arrivals of county grange representatives.

The first session of the day was called at the usual hour, with Prof. A. W. Shlymaker, of Wyoming, Del., on the platform for the discussion on "The Pear." Prof. Shlymaker manipulated his subject in a skillful and masterly manner and his methods were practical, plain and business-like. Although there are few pears raised in this county, compared with what some of our sister counties produce, his views, no doubt, very materially increased the broad-mindedness of some growers here and at other places on the peninsula.

Prof. E. A. Evans, of Cheywood, Del., told of his success with grapes, describing the necessary requisites to the growth of good marketable grapes, and how to best plant, cultivate and harvest the crop. His address was also instructive. Prof. E. C. Meyers concluded the morning session with a talk on "Experiment with Cabbage and Turnips."

The Afternoon Session

After the morning session, which was opened by Prof. E. W. Sylvester, of the Delaware Agricultural College, delivering an address on Education, the pa-

ge of the Centreville High School and

Centreville Primary School being pre-

pared at special invitation. He made a

plea for the further education of the

boys and girls of our country, stating

that they were the country's greatest

natural resource. Incidentally he favored

increasing the school appropria-

tions so that the little one-room

schools of today, which he says are but

relics of primitive days, may be re-

moved and the necessary buildings

erected in their stead. He also recom-

mended extensive outside school im-

provements, and endorsed the good

roads law as the means of placing the

rural districts in closer relationship

with educational facilities. He also

spoke of the growth and work of the

Maryland Agricultural College, and

gave a short resume of the different

fruit diseases and the preventatives

now in use. He concluded by saying:

"The American farmer represents the

highest type of the Nation's citizenship

and he must enjoy the same facilities

as his more fortunate brother, in order

to overcome at least some of the ob-

stacles of rural life."

The afternoon session adjourned af-

ter being addressed by Prof. C. A.

McCue, of the Delaware Experiment

Station, and Prof. T. B. Symons, of

the Maryland Experiment Station, on

"Spraying" and "Insects."

The Last Evening Session

The Wednesday evening session was devoted almost entirely to apple growing discussions. The principal addresses were delivered by J. W. Kerr, of Denton; E. Cyrus Miller, of Massachusetts, and Prof. E. C. Myers. The address of Prof. Miller was illustrated by lantern slides. The addresses were listened to with eager interest, apple growers recognizing the ability of the speakers and their methods in every respect. That Maryland is a great fruit growing state these gentlemen pointed out from the fact that the Maryland State Horticultural Society had exhibited fruit three times in the West, in competition with the foremost apple growing sections of the Western coun-

try and out of a total of 86 entries has won 46 prizes, 41 of which has been gold medals and first premiums. At the Rocky Mountain Apple Exposition, held in Denver last week, Maryland apples won fifty per cent. of the first premiums.

Following the addresses the gathering repaired to the Exhibit Room, where the remainder of the evening was spent in individual discussions of the relative merits of the different displays and otherwise.

The Last Session

Following two days of success in the discussions of different plants, fruits and vegetables, the last session of the convention was held Thursday morning. Cantaloupe was the subject of a discourse by Dr. Alfred Smith, of Delaware, and his address was followed by talks on the "Importance of Seed" by W. W. Tracy, of the United States Department of Agriculture, and a talk of "Eastern Shore Horticulture, What It Has Been and What It Should Be," by Prof. W. F. Massay, of Salisbury.

Prof. C. P. Close also gave an interesting description on the Nut and Apple Exhibit at Denver, Colorado, and of the Horticultural Society Exhibit at Council Bluffs, in the middle West last Fall. The meeting adjourned at 12 o'clock.

Election of Officers

One of the most important features of the entire convention was disposed of after the regular session. The election of officers for the ensuing year was placed in the hands of a committee in the early part of the convention, and in an election Thursday morning the following men were named to look after the interests of the Horticultural Society on this Peninsula:

President—F. C. Bancroft, of Wyoming, Delaware.

Vice-President—J. W. Hall, of Maryland.

Secretary-Treasurer—Wesley Webb, of Dover, Delaware.

Vice-Presidents for the Counties:

DELAWARE.

Cecil—W. D. Bradford, Middletown.

Kent—James S. Harris, Still Pond.

Queen Anne—H. P. Skipper, Chestertown.

Caroline—J. W. Kerr, Denton.
